# MOVING EXISTING APPS TO THE CLOUD

# THE SPECTRUM OF ENTERPRISE APPS

# MIGRATION AND MODERNIZATION APPROACHES

## MODERNIZING EXISTING APPS

- Reuse existing functionality and data as much as possible
- Move existing workloads to a modern deployment platform
- Apply new processes, products, and technology to existing apps

## DEVELOPING NEW APPLICATIONS

- API-centric polyglot microservices architecture
- Autonomous development teams
- Agile development, continuous deployment, DevOps culture
- Containerized & orchestrated cloud deployments

# PATTERNS IN MODERNIZING WORKLOADS

## LIFT & SHIFT

- **Containerize** existing workloads
- Deploy them on a **PaaS**
- Keep external integrations and data on legacy
- Legacy applications have to be well written and suited

## CONNECT & EXTEND

- **Legacy remains intact**
- New layer - new capabilities
- Deploy on **PaaS**
- **New integration points** between legacy and new layers (**Need for Agile Integration**)

## RIP & RE-WRITE

- **Legacy is totally replaced**
- New interfaces and data
- Use **PaaS** to run
- Some data and features can be re-wrapped, but mostly are retired.

[1] The microservice is a simple REST application.

[2] All runtimes are using their default settings

[3] The performance test was conducted with ApacheBench using 500K request with 50 users and keep-alive enabled.

# LAB: MOVING EXISTING APPS TO THE CLOUD

# GOAL FOR LAB

In this lab you will learn:

- How to migrate an existing legacy Java EE application (CoolStore) from Weblogic to **JBoss EAP** using **Red Hat Application Migration Toolkit**
- How to deploy the result to **OpenShift container platform** to create a *Fast Moving Monolith*
- Different alternatives to building and deploying an application

# LAB: MOVING EXISTING APPS TO THE CLOUD

A man with wild white hair, wearing a light-colored lab coat and green safety goggles, is holding a pair of pliers in both hands. He is looking down at the pliers with a focused expression. The background is a workshop or laboratory with various tools and equipment visible. A dark, semi-transparent overlay covers the top half of the image, containing white text. At the bottom, there is a blue pill-shaped button with white text, followed by a dark grey rectangular box with white text.

# WRAP-UP AND DISCUSSION

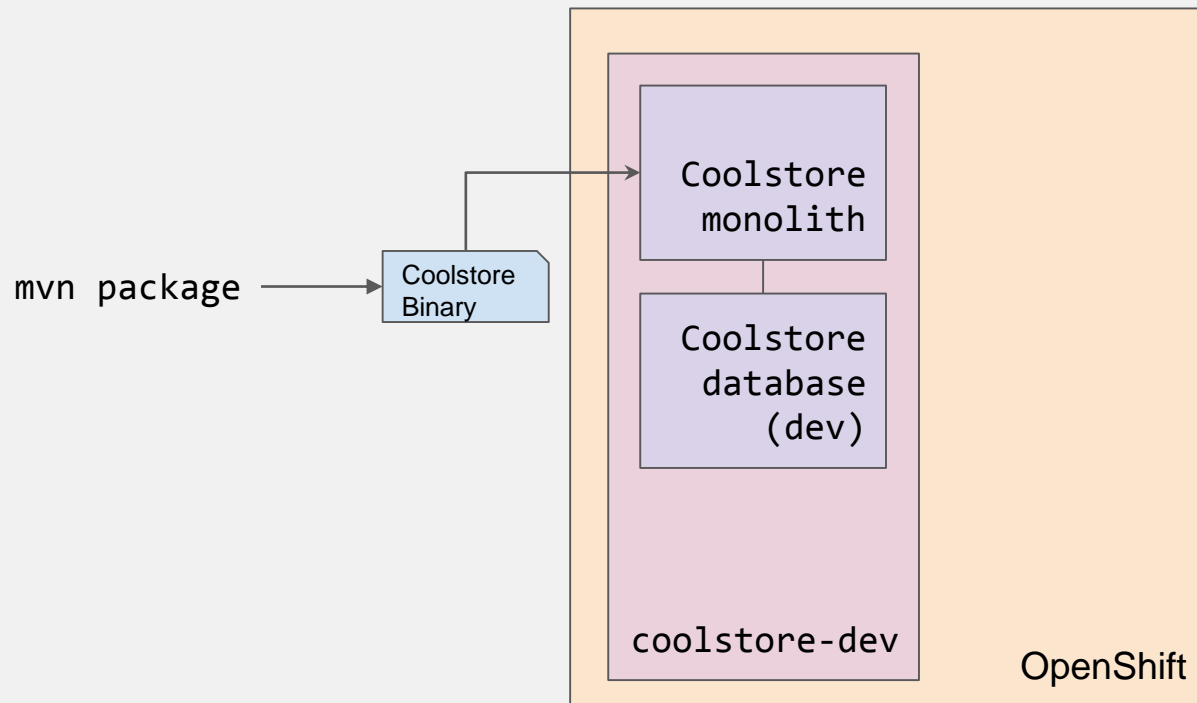

# RESULT OF LAB

In this lab you:

- Familiarized yourself with the Lab environment
- Migrated the CoolStore monolith from Weblogic to **JBoss EAP** using **Red Hat Application Migration Toolkit**
- Created a new development project on **OpenShift**
- Deployed the migrated app to OpenShift using a Template and a Binary Build
- In the next lab you will explore OpenShift deeper as a developer
